

SERVICE MANUAL

COMPUTERIZED FULLY AUTOMATIC
DD TURNTABLE

SANSUI P-L95R

(Silver & Black Model)

CAUTION

1. Parts identified by the Δ symbol on the schematic diagram and the parts list are critical for safety. Use only replacement parts that have critical characteristics recommended by the manufacturer.
2. Make leakage-current or resistance measurements to determine that exposed parts are acceptably insulated from the supply circuit before returning the appliance to the customer.

•SPECIFICATIONS

Type.....	Direct-drive turntable
Rated speeds.....	33-1/3, 45 rpm
Platter.....	Aluminum alloy diecast, 76 mm (3") diameter, 0.37 kg (0.8 lbs.) weight
Motor	Coreless and Brushless DC/FG Servo
Wow/flutter	0.08% (WRMS)
Signal-to-noise ratio	Better than 72 dB (DIN-B) Better than 60 dB (IEC-B)
Effective tonearm length	70 mm (2-3/4")
Cartridge.....	Dual Magnet type
Output voltage.....	2.5 mV (1,000 Hz, 35.4 mm/sec)
Correct load impedance	47 kilohms
Frequency response.....	10 ~ 20,000 Hz
Stylus.....	0.6 mil diamond stylus (SN-909 replacement stylus)
Others:	
Power voltage	110 ~ 120V/220 ~ 240V (50/60 Hz)
For U.S.A. and Canada ..	120 V (60 Hz)
Power consumption	25 W
Dimensions.....	435 mm (17-1/8") W 128 mm (5-1/32") H 355 mm (14") D
Weight.....	8.2 kg (18.1 lbs.) net 9.7 kg (21.4 lbs.) packed

* Design and specifications subject to change without notice for improvements.
* Due to local laws and regulations, this unit sold in some areas are not equipped with variable voltage selectors.

CAUTION

1. The symbols, UL, CSA, SA, BS, UK, EU, AS, XX <EXPORT> and XX-V <EXPORT(V)> on the parts list and the schematic diagram mean followings respectively.
UL..... Manufactured for U.S.A market.
(Underwriters Laboratories approved model.)
CSA..... Manufactured for Canadian market.
SA..... Manufactured for South African market.
BS, UK..... Manufactured for United Kingdom market.
EU..... Manufactured for European market.
AS..... Manufactured for Australian market.
XX <EXPORT>..... Standard Version with Inner Voltage Selector.
XX-V <EXPORT(V)>.... Standard Version with Outer Voltage Selector.
NON MARK..... Common Parts.
2. Some printed circuit boards are not supplied as the assembled. To separate these in this service manual, the stock No's are not indicated at the ends of the board names. However, the individual parts on the circuit boards are provided by orders.
3. Since some of capacitors and resistors are omitted from parts lists in this service manual, refer to the Common Parts List for capacitors & resistors, which was issued on February 1983.
4. Abbreviations in this service manual are as follows.

•Abbreviations List

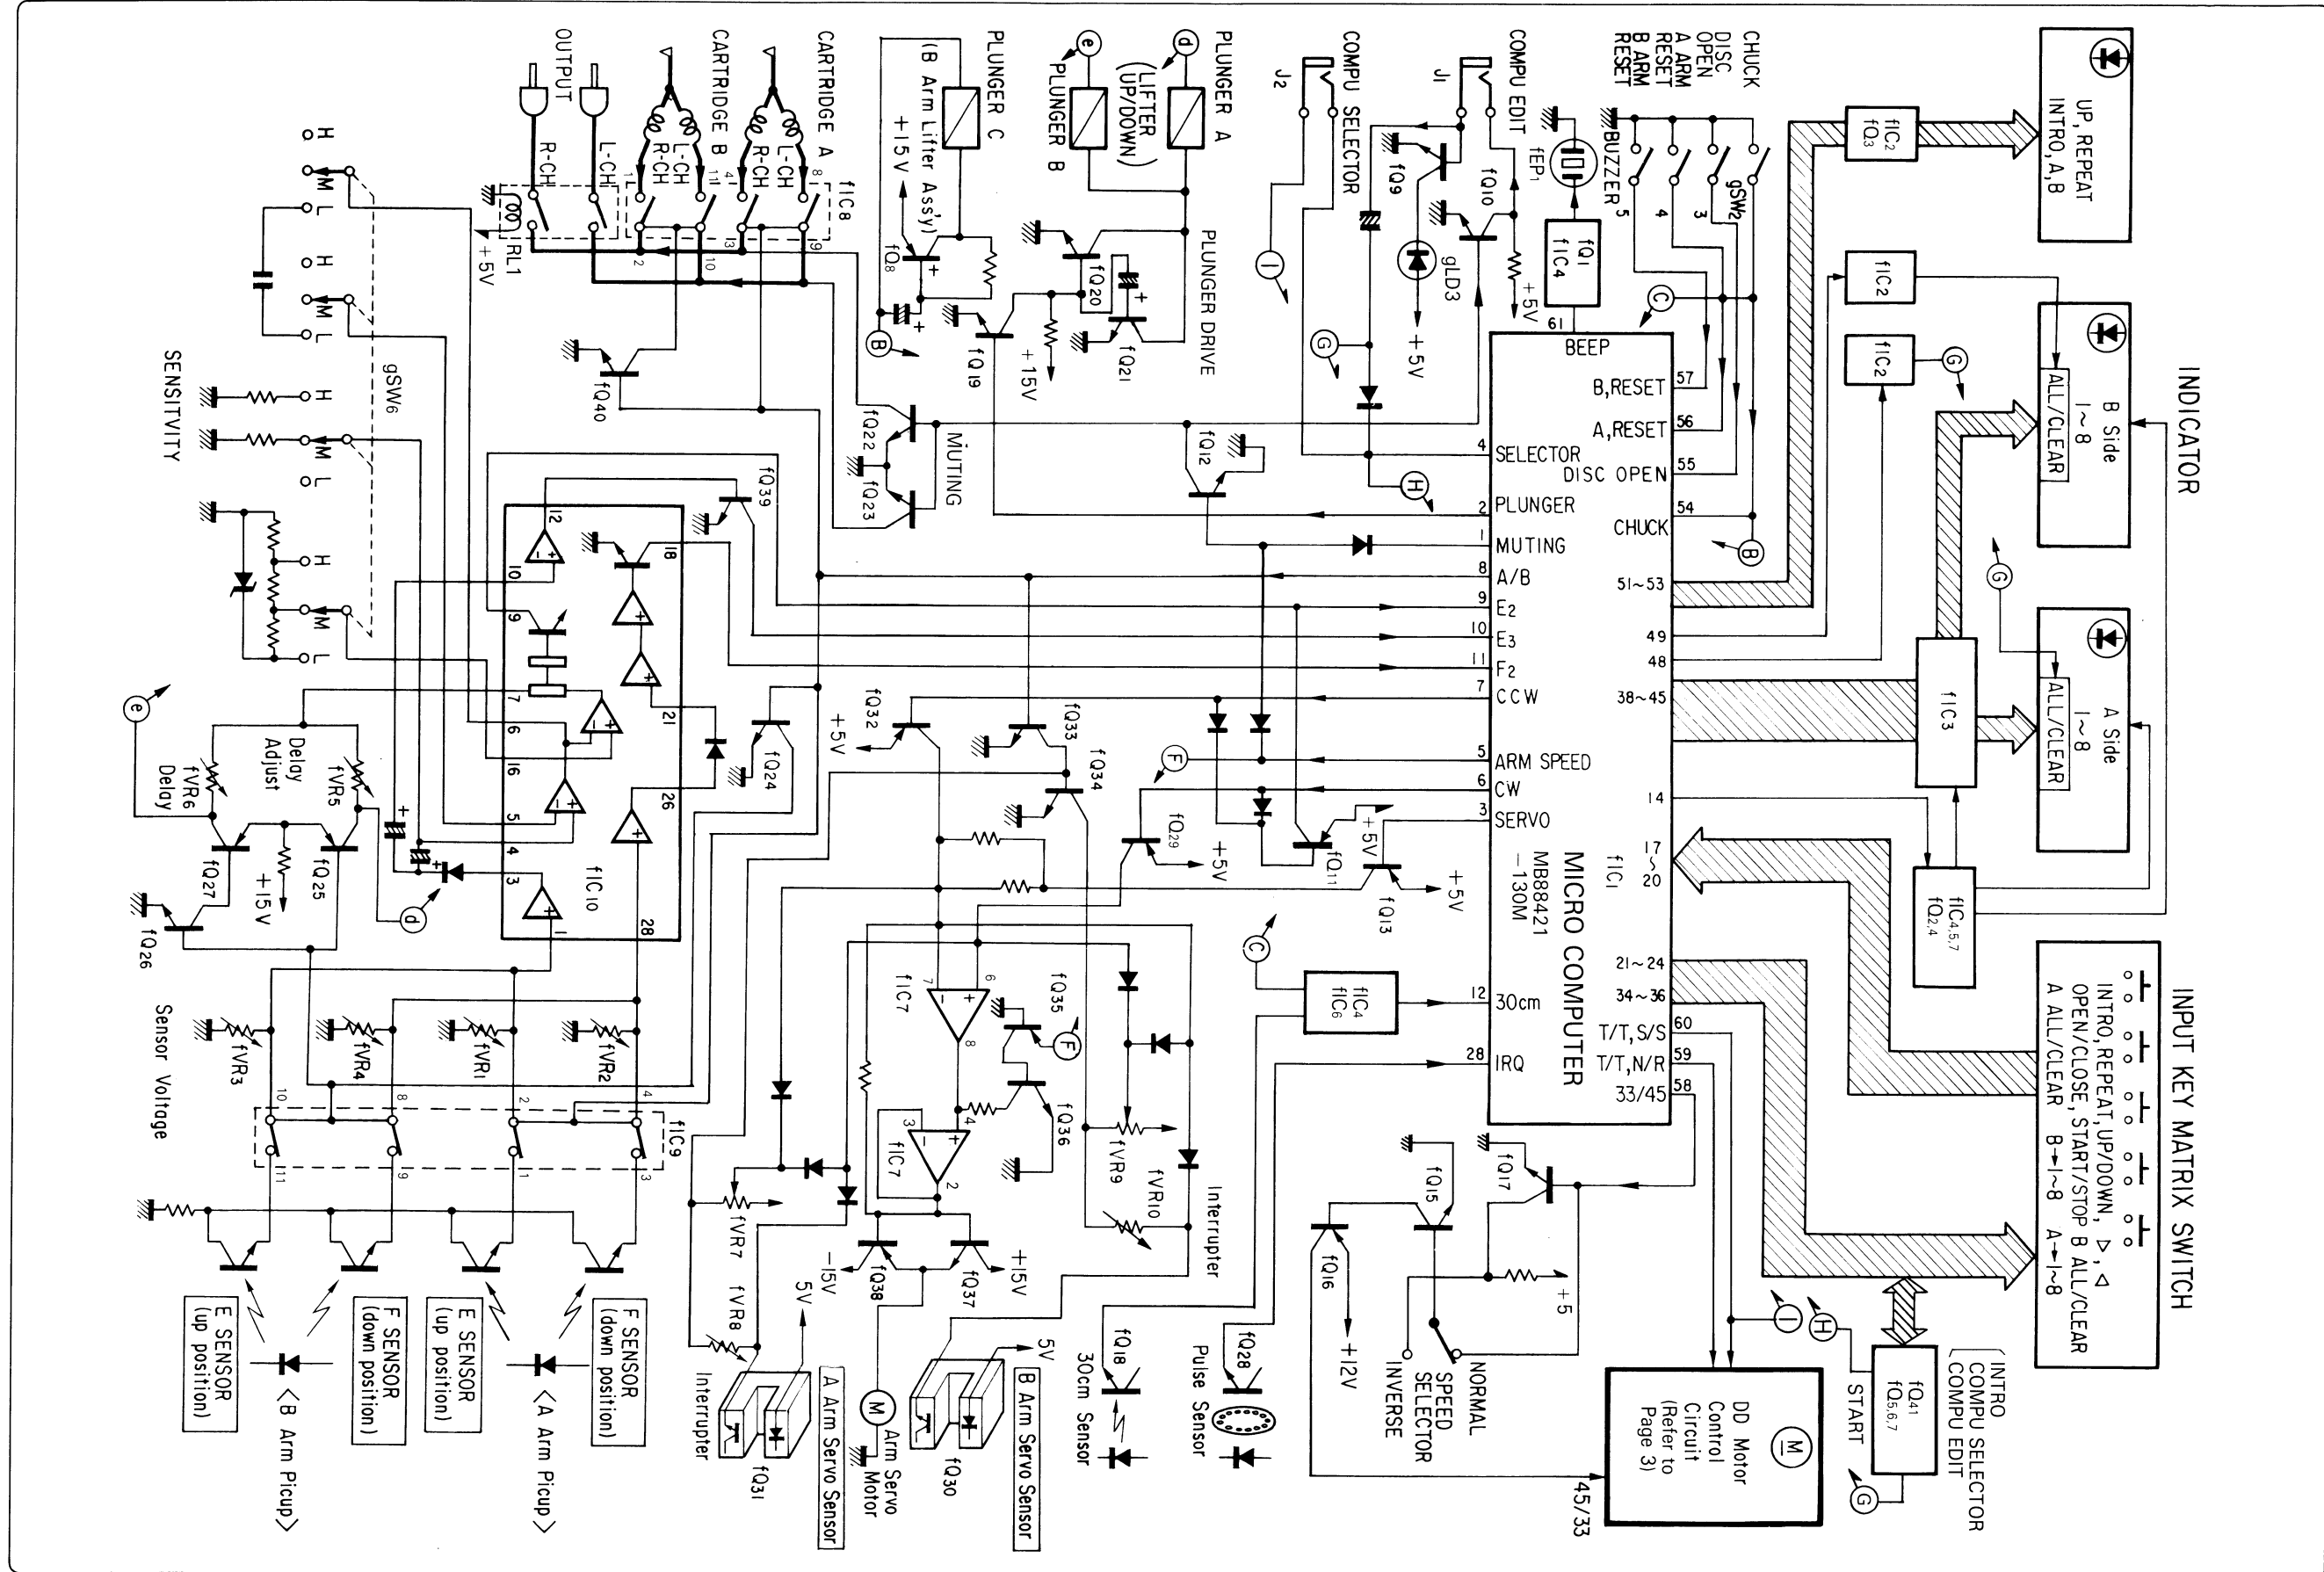

C.R. : Carbon Resistor	E.B.L. : Low Leak Bi-Polar
S.R. : Solid Resistor	Electrolytic Capacitor
Ce.R. : Cement Resistor	Ta.C. : Tantalum Capacitor
M.R. : Metal Film Resistor	F.C. : Film Capacitor
F.R. : Fusing Resistor	M.P. : Metalized Paper Capacitor
N.I.R. : Non-Inflammable Resistor	P.C. : Polystyrene Capacitor
A.R. : Array Resistor	G.C. : Gimmic Capacitor
C.C. : Ceramic Capacitor	A.C. : Array Capacitor
C.T. : Ceramic Capacitor, Temperature Compensation	V.R. : Variable Resistor
E.C. : Electrolytic Capacitor	S.V.R. : Semi Variable Resistor
E.L. : Low Leak Electrolytic Capacitor	SW. : Switch
E.B. : Bi-Polar Electrolytic Capacitor	Chip R. : Chip Resistor
	Chip C. : Chip Capacitor

Sansui

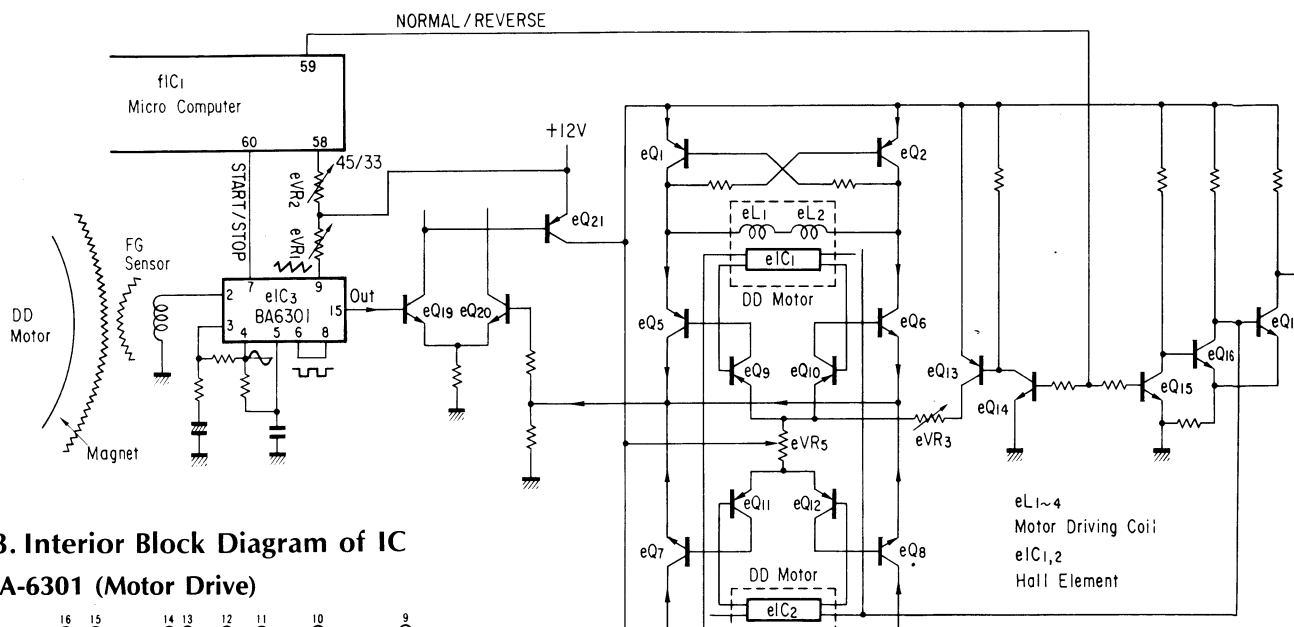

SANSUI ELECTRIC CO., LTD.

1. BLOCK DIAGRAM

1-1. Arm Control Circuit

1-2. Motor Control Circuit <S-0206>

1-3. Interior Block Diagram of IC

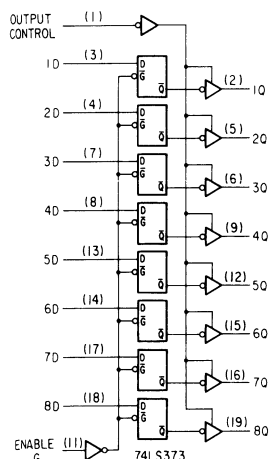

•BA-6301 (Motor Drive)

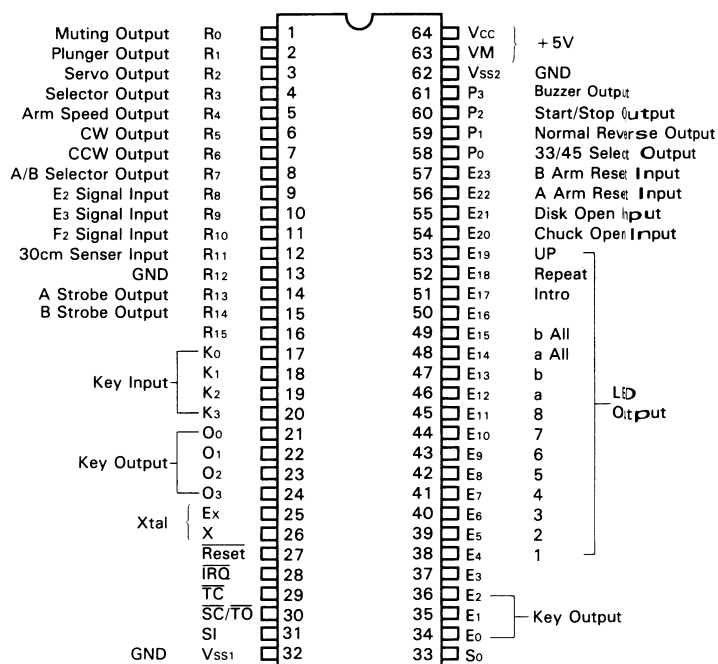

•BA-6150 (Tone Arm Servo Control)

•74LS373 (Octal 3state D-latch)

•MB88421 (Micro computer)

2. MAIN CIRCUIT FUNCTIONS

1. Pulse sensor

In the microcomputer, various motor speeds are stored, which are suitable for the reset positions and the lead-out positions of 30cm, 25cm and 17cm size record disk. The arm is moved down in combination of signals detected by the 30cm disk sensor, 25cm and 17cm disk detection signals (E_3) detected by the E sensor, and signals detected by the pulse sensors corresponding to disk sizes.

2. 30cm disk selecting sensor

The position of the arm on the arm rest is located near the lead-in position of a 30cm disk. Therefore, a separate sensor is arranged to securely select a 30cm disk, without use of the signal (E_3) detected by the E sensor.

3. E, F sensor

The signals detected by the E, F sensor are divided into three signals E_2 , E_3 , and F_2 through appropriate circuits.

- **E_2 signal** indicates the number of counted musics, which is necessary to move down the tone arm onto the start of a desired music during the automatic music selection operation.
- **E_3 signal** indicates the presence or absence of a 25cm or 17cm size disk.
- **F_2 signal** indicates the detection of a music intermission during automatic music selection operation (tracing operation) and detection of the end of the last music. The arm is lifted up in combination of this F_2 signal and the pulse sensor signals.

4. Delay circuit

Since the E sensor is located about 3mm ahead of the stylus tip, it is necessary to delay the signal detected by the E sensor electrically. By adjusting this circuit, it is possible to eliminate the signal detection error caused by mismatching of the mechanism operation.

5. Music selection sensitivity switching circuit

The signals E_2 , F_2 are converted into three different stages in order to perform an accurate automatic music selection operation.

6. CHUCK switch (gSW_2)

This switch detects that a record disk is perfectly mounted.

7. DISK OPEN switch (gSW_3)

This switch detects that the disk plate is pulled out perfectly.

8. A, B ARM RESET switches (gSW_4 , gSW_5)

These switches detect that the A, B arms are reset, respectively.

9. Muting operation timing

- During the automatic disk selection operation and the manual operation, the muting is off when the lifter is down but on when the lifter is up.
- When the stylus goes down onto a music intermission interval during the automatic music selection operation, the muting is off 1.7 secs after the stylus begins to go down. Further, when the stylus goes down onto a modulated groove near the end of the preceding music, the muting is off the instant the succeeding music intermission is detected.

•Input Key Matrix of Microcomputer IC MB88421

NO.	Key Name	Key Matrix	NO.	Key Name	Key Matrix	NO.	Key Name	Key Matrix

3-2. 30cm Disk Selection Lead-in, End Timing

3-3. 2nd Music Selection Timing on 30cm Disk of A Side

3-4. ALL INTRO SKIP Timing

4. ADJUSTMENT

A. Preparation

1. Remove the top plate. (See "How to replace the main parts" on page 15.)
2. Since the TP pins of F-5033 board may disappear under the motor frame when the arm moves, connect some wires to the TP pins necessary for adjustment. (See Fig. 4-1)
3. Turn on the interlock switch in accordance with the following procedure: (See Fig. 4-2)
 - 1) Remove two small screws for mounting the interlock switch.
 - 2) Roll up an appropriately sized paper as shown, insert the rolled paper into the contact portion of the microswitches, and then fixed it by an adhesive tape.

Fig. 4-1

B. Caution

1. The A-arm and B-arm are mechanically linked with each other. Further, the reset position of A-arm corresponds to the lead-out position of B-arm. Therefore, it is possible to know the B-arm position on the basis of the A-arm position. However, positively depress each key ALL a, ALL b, , and .
2. The adjusting Semi variable resistor of F-5033 may disappear under the motor frame as the arm moves. Therefore, adjust it through an adjusting aperture of motor frame. (See Fig. 4-1)
3. In case the operation keys are inoperative, turn off the main power switch and then turn on it again before depressing the operation keys. (See Fig. 4-1)
4. Perform the adjustment in accordance with the determined procedure.

Fig. 4-2

Fig. 4-3

4. ADJUSTMENT

A. Preparation

1. Remove the top plate. (See "How to replace the main parts" on page 15.)
2. Since the TP pins of F-5033 board may disappear under the motor frame when the arm moves, connect some wires to the TP pins necessary for adjustment. (See Fig. 4-1)
3. Turn on the interlock switch in accordance with the following procedure: (See Fig. 4-2)
 - 1) Remove two small screws for mounting the interlock switch.
 - 2) Roll up an appropriately sized paper as shown, insert the rolled paper into the contact portion of the microswitches, and then fixed it by an adhesive tape.

B. Caution

1. The A-arm and B-arm are mechanically linked with each other. Further, the reset position of A-arm corresponds to the lead-out position of B-arm. Therefore, it is possible to know the B-arm position on the basis of the A-arm position. However, positively depress each key ALL a, ALL b, , and .
2. The adjusting Semi variable resistor of F-5033 may disappear under the motor frame as the arm moves. Therefore, adjust it through an adjusting aperture of motor frame. (See Fig. 4-1)
3. In case the operation keys are inoperative, turn off the main power switch and then turn on it again before depressing the operation keys.
4. Perform the adjustment in accordance with the determined procedure.

Fig. 4-2

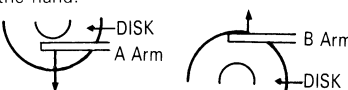

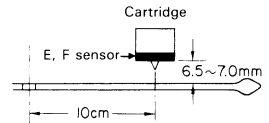

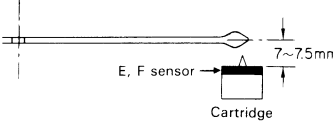

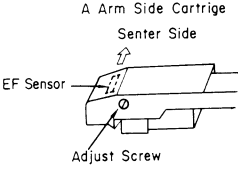

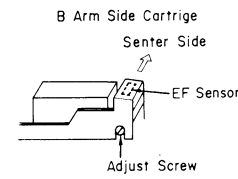

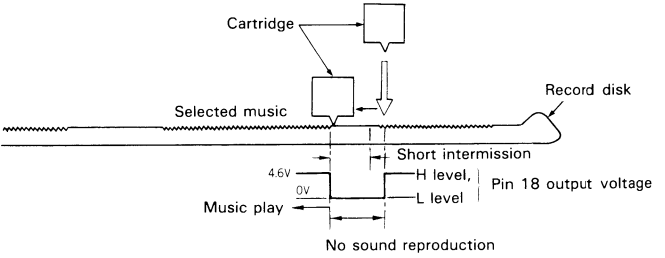

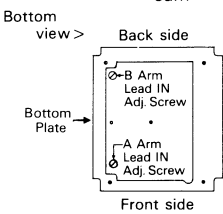

Fig. 4-3

•Adjustment List (See Figs. 4-1 and 4-3 for points to be checked and adjusted)

	Adjustment Procedure	Checked Position	Adjusted Parts	Adjustment Contents	Adjusting Conditions
1	A-arm interrupter voltage adjustment	Between TP A on F-5032 (fQ31 emitter) and GND DC voltmeter	fVR8 (F-5032)	DC 4V ± 0.1V	1. Without any record disk. 2. Stop DD motor. 3. Bring A-arm near lead-out position (B-arm read-in position) by the hand. 4. Adjust the voltage when A- or B-arm is moved to its extreme outside position by the hand.
2	B-arm interrupter voltage adjustment	Between TP B on F-5032 (fQ30 emitter) and GND DC voltmeter	fVR10 (F-5032)	DC 4V ± 0.1V	
3	A-arm servo voltage adjustment	Between TP M on F-5032 (on the Positive side of arm servo-motor) and GND DC voltmeter	fVR7 (F-5032)	DC -1V (It is preferable that the arm moves about 0.5mm toward the inside when lifter is down.)	1. Set a 30cm disk. 2. Stop DD motor. 3. Bring A-arm near lead-out position or B-arm near lead-in position by the hand. 4. Set lifter down by the hand.
4	B-arm servo voltage adjustment	Between TP M on F-5032 (on the Positive side of arm servo-motor) and GND DC voltmeter	fVR9 (F-5032)	DC +1V (It is preferable that the arm moves about 0.5mm toward the inside when lifter is down.)	
5	A-arm height adjustment	Measure the height between disk surface and E, F sensor with a rule.	Height adjusting screw (See Fig. 6-7 on page 14).	Adjust the distance between record disk and sensor to 6.5 ~ 7mm. 	1. Set a 30cm disk. 2. Stop DD motor. 3. Move the arm to a position 10 away from the center of the disk by the hand. 4. Keep lifter in UP state.
6	B-arm height adjustment	Measure the height between disk surface and E, F sensor with a rule.	Height adjusting screw (See Fig. 6-8 on page 14).	Adjust the distance between record disk and sensor to 6.5 ~ 7mm. The distance between the disk bisecting plane perpendicular to the disk axis and sensor is to be adjusted to 7 ~ 7.5mm as shown below. 	1. Set a 30cm disk. 2. Stop DD motor. 3. Move B-arm to reset position by the hand. 4. Keep lifter in UP state. 5. The adjusting screw appears, if the main power switch is turned off when the disk base is pulled outward to its extreme position by depressing OPEN key without setting any record disk.
7	A-arm E-sensor sensitivity adjustment	Between TPE ₂ on F-5033 (fD34, Cathode) and GND DC voltmeter	fVR1 (F-5033)	DC 2.5V ± 0.1V	1. Set a 30cm disk having no cut grooves. 2. Stop DD motor. 3. Move the arm to a position about 10cm away from the disk center by the hand. Since the adjusting control knob is not rotatable at this position, move the arm to the lead-in position only while rotating the adjusting control knob.
8	A-arm F-sensor sensitivity adjustment	Between TPF ₂ on F-5033 (fD32, Cathode) and GND DC voltmeter	fVR2 (F-5033)	DC 2.7V ± 0.1V	4. Adjust E sensor with the arm kept in UP state and F sensor with the arm kept in DOWN state.
9	B-arm E-sensor sensitivity adjustment	Between TPE ₂ on F-5033 (fD34, Cathode) and GND DC voltmeter	fVR3 (F-5033)	DC 2.5V ± 0.1V	1. Set a 30cm disk having no cut grooves. 2. Stop DD motor. 3. Move the arm to a position about 10cm away from the disk center by the hand. Since the adjusting control knob is not rotatable at this position, move the arm to the lead-in position only while rotating the adjusting control knob.
10	B-arm F-sensor sensitivity adjustment	Between TPF ₂ on F-5033 (fD32, Cathode) and GND DC voltmeter	fVR4 (F-5033)	DC 2.7V ± 0.1V	4. Adjust E sensor with the arm kept in UP state and F sensor with the arm kept in DOWN state.

	Adjustment Procedure	Checked Position	Adjusted Parts	Adjustment Contents	Adjusting Conditions
11	A-arm E, F sensor lateral-direction adjustment (Perform this adjustment only where A-arm is in a bad condition even after E, F sensor sensitivity adjustment (Item 7 and 8) and E ₂ signal-ready adjustment (Item 13) have been achieved.)	Between fIC10 Pin18 and GND DC voltmeter	E, F sensor adjusting screw	 1. Start music reproduction by selecting a music having a short music intermission interval between two modulated grooves. 2. Adjust the arm so that the stylus comes down onto a position a little ahead of the short music intermission interval and an L-level voltage may be generated the instant the stylus moves across the short music intermission interval. 3. Be sure that the muting is off (music reproduction starts) beginning from the start of the selected music. 4. In the case of the B-arm, it is impossible to see the record disk surface. Therefore, select the same music as in the A-arm and start the music reproduction. The same adjustment as in the A-arm should be made after UP/DOWN indicator light goes off.	1. Set a 30cm disk having a short music intermission interval. 2. Set the sensitivity selector switch to H. 3. Rotate A- or B-arm E, F sensor adjusting screw counterclockwise to its extreme position to move the sensor at a position the nearest to the center of the disk. 4. A-Side adjustment: Turn delay adjusting S.V.R (fVR5) fully counterclockwise. B-Side adjustment: Turn delay adjusting S.V.R (fVR6) fully counterclockwise. Do not turn fully counterclockwise fVR5 and fVR6 at the same time.
12	B-arm E, F sensor lateral-direction adjustment (Perform this adjustment only where A-arm is in a bad condition even after E, F sensor sensitivity adjustment (Items 9 and 10) and E ₂ signal-ready adjustment (Item 14) have been achieved.)	Between fIC10 Pin18 and GND DC voltmeter	E, F sensor adjusting screw	 	
13	A-arm E ₂ signal delay adjustment	Stylus-down position during automatic music selection operation	fVR5 (F-5033)	1. Repeatedly reproduce a music having a short music intermission interval between two modulated grooves by leading-in the arm onto a position a little ahead of the short music intermission interval.	1. Set a 30cm disk having a short music intermission interval. 2. Set the sensitivity selector switch to H.
14	B-arm E ₂ signal delay adjustment	Stylus-down position during automatic music selection operation	fVR6 (F-5033)	2. Check that when the stylus goes down onto a position ahead of the short music intermission interval, the muting operation is off about 4 ~ 6 secs after the stylus tip is brought into contact with the disk. 3. In the case of the B-arm, it is impossible to see the record disk surface. Therefore, select the same music as in the A-arm and start the music reproduction. Be sure that the muting is off about 4 ~ 6 secs after the UP/DOWN indicator light goes off.	
15	A-arm lead-in adjustment	Lead-in position	Adjusting cam	1. Lead-in the arm onto a 30cm disk during automatic disk selection operation and adjust the arm so that the stylus can come down onto the lead-in groove.	1. Set the sensitivity selector switch to M. 2. Set a 30cm disk. 3. Set a 17cm disk after the above 30cm disk adjustment.
16	B-arm lead-in adjustment			2. Check the lead-out operation, simultaneously. After the B-arm is led out, the A-arm operation begins, the A-arm returns to its reset position. 3. Confirm 1.2 above in 17 cm disk as well.	
17	DD motor speed adjustment to 33rpm	Motor revolution speed	eVR1 (S-0206)	Adjust the motor speed so that a strobo pattern of 33rpm appears to be stopped. (only adjustment in the reverse direction.)	1. Remove motor frame and place it as shown in Fig. 4-3 on page 6. 2. Put the strobo pattern center at the disk center and fix the pattern by a double-adhesive tape.
18	DD motor speed adjustment to 45rpm	Motor revolution speed	eVR2 (S-0206)	Adjust the motor speed so that a strobo pattern of 45rpm appears to be stopped. (only adjustment in the reverse direction.)	3. Remove the 6-lead parallel cord from board S-0206 as shown and then connect the +15V lead and the GND lead to 15V terminal and GND terminal of the 6-pin connector, respectively. 4. Connect a resistor to 6-pin connector as shown. 5. The motor speed can be selected as shown in the Table by switching the circuit.
19	Mechanical sensors are used when eVR3 and eVR5 are replaced.				

	S ₁ ~ S ₃	
	OPEN	CLOSE
S ₁	33rpm	45rpm
S ₂	TURN	STOP
S ₃	NORMAL A Arm	REVERSE B Arm

Parallel Cord
GND
+15V
White

R₁, R₂, R₃
4.7kΩ 1/4W C.R.

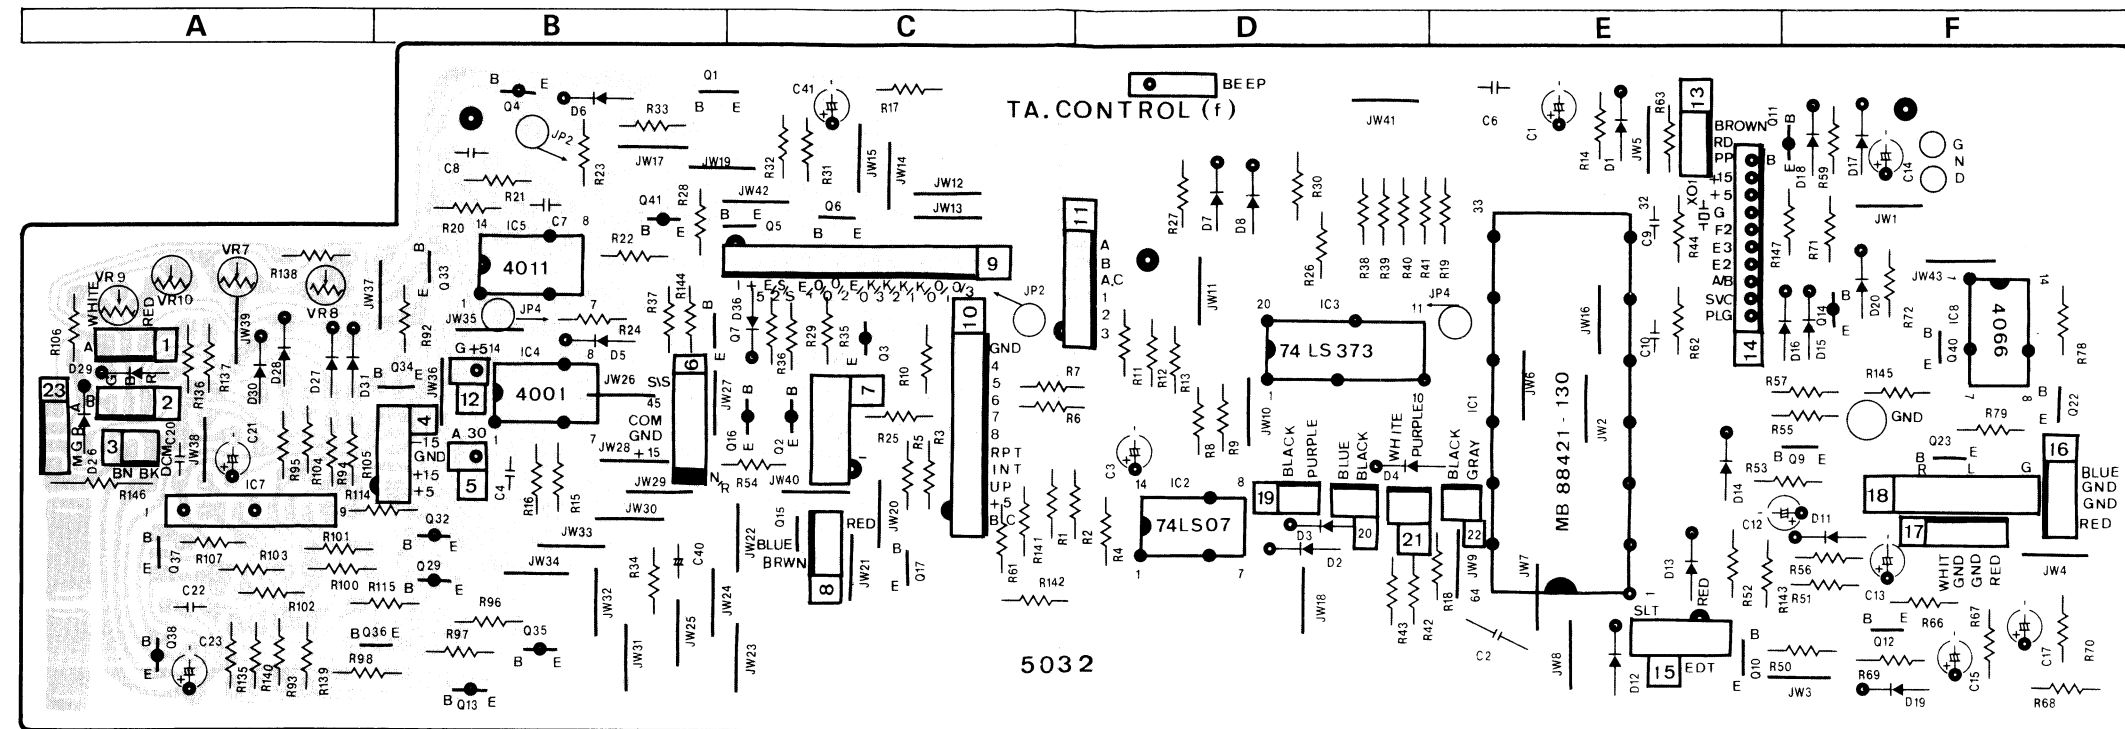

Note) There exists a set where apertures are formed in board F-0206 on the back side of eVR1 and eVR2.
In the set of this type, it is possible to adjust the motor speed after setting a 30cm disk and mounting a strobo pattern on the disk, without removing the motor frame.

7. HOW TO REPLACE MAIN PARTS

A. How to remove Front panel and Stylus

- 1) Press the OPEN/CLOSE key so that the **record table protrudes approx. 10 cm**, and press the POWER switch to switch the power off.
- 2) Remove 2 rear screws and the top plate, then remove 2 screws and the rear cover.
- 3) Unfasten the hooks at both sides at the rear of the front panel, pull toward you gently, turn over and set on top of the unit. Take care not to damage the front panel during this procedure.
- 4) Pull the stylus holder out gently in the direction of the arrow as shown in the diagram (Fig. 7-1). Next, taking care not to touch the

stylus tip fit the replacement stylus by the reverse procedure to that used for removal.

- 5) Attach the front panel by reversing the removal procedure. Caution is required as the POWER switch will strike the rear of the panel when it is attached.
- Also, be sure to securely fasten the hooks at the rear of the panel.
- 6) Fit the 2 screws for the rear cover and top plate respectively.
- 7) Switch on power to the unit. The disk base automatically draws in.

Fig. 7-1

B. How to remove Front cover (See Fig. 7-2)

- 1) Remove the front panel. (See A. Front panel and Stylus)
- 2) Loosen a Screw (SA) fixing front cover.
- 3) Unhook the front cover through the apertures formed on this side of the right- and left-side panel and then extract the front cover toward you.

Fig. 7-2

C. How to remove keyboard

- 1) Remove the top plate and front panel.
- 2) Remove F-5034 circuit board.
- 3) Remove three screws for fixing the keyboard Ass'y and keyboard holder to the front panel.

D. How to remove side panels

- 1) Remove the top plate, front panel and front cover.
- 2) Remove four screws for fixing the side panels and top plate.
- 3) Extract the right- and left-side panels.
- 4) Remove the rear panel.

E. How to remove disk driving DD motor with control board

- 1) Remove the top plate, front panel, front cover, right- and left-side panels, and rear panel.
- 2) Remove four 4 × 8 binding screws for fixing the motor frame.
- 3) Place the removed motor frame on the right hand of the set.
- 4) Remove three 4 × 12 screws for mounting the motor.

Fig. 7-3

F. How to remove A-arm assembly and lifter assembly (See Fig. 6-7 on Page 14)

- 1) Remove the top plate and front panel.
- 2) Disconnect the lead extending from the arm of board S-0211.
- 3) Remove a 2×4 binding screw for mounting board S-0211.
- 4) Remove two 2×4 flat-head screws for fixing the lifter assembly.

G. How to remove B-arm assembly and lifter assembly (See Fig. 6-8 on Page 14)

- 1) Remove the top plate, front panel, front cover, right- and left-side panels, rear panel, and motor frame.
- 2) Set the B-arm at its reset position by pulling the disk plate to its extreme end. (Turn on OPEN key and then off when the disk base is pulled out extremely.)
- 3) Remove the B-arm stylus.
- 4) Remove two 3×8 screws fixing the arm plate.
- 5) Perform the same procedure from (2) to (4) stated in item F above.

H. How to remove disk base and disk plate (See Fig. 7-4)

- 1) Remove the top plate, front panel, front cover, right- and left-side panels, and rear panel.
- 2) Pull the disk base toward you to its extreme front end by depressing OPEN key.
- 3) Loosen Lock Screw for fixing mechanism-driving strings to the disk plate. Remove the string from the metal fixture (Lock Plate). (Take care not to remove the fixture from the disk plate by excessively loosening the screw.)
- 4) Remove a 3×8 fixture screw positioned (Stopper) on the left side of the disk base. (Fig. 7-6)
- 5) Extract the disk base together with the disk plate.

Fig. 7-4

Fig. 7-5

I. How to install disk base and disk plate (See Figs. 7-4, 7-5, and 7-6)

- 1) Depress OPEN/CLOSE key to move the movable pulley P₁ to position A, the movable pulley P₂ to position C and the A and B-arms to positions E and F, respectively. (See Fig. 6-4 on Page 12)
- 2) Fit the disk plate onto the disk base.
- 3) Mount the disk plate onto the rail and then push it about 10cm. Fix the disk plate with a metal fixture (Stopper) located at the left side of the disk base.
- 4) Pull the disk plate to its extreme front end and then hang two right and left strings on the string fixing fixture (Lock Plate) located on the plate end portion.
- 5) By depressing OPEN/CLOSE key, push the disk table to its extreme rear position by the hand, when the movable pulley P₁ moves from position A to position B. (See Fig. 6-4 on Page 12)
- 6) Push the disk plate to a position where the disk plate is tightly in contact with the rear portion of the disk base.
- 7) Tighten two string fixing screws. The string drives the mechanism of the disk plate.
- 8) Be sure that the disk base and disk plate move normally by depressing OPEN/CLOSE key.

Fig. 7-6

J. How to remove drive gear assembly and arm servomotor (See Fig. 6-6 on page 13)

- 1) Set the A-arm at its extreme rear position. (Turn on OPEN/CLOSE Key and turn off the main switch when the A-arm reaches the extreme rear end position.)
- 2) Remove the top plate, front panel, front cover, right- and left-side panels and the rear panel.
- 3) Remove the disk plate and disk base.
- 4) Remove screws for mounting the arm servomotor.
- 5) Remove screws for mounting the drive gear assembly.

8. HOW TO REPLACE MECHANISM DRIVING STRING

(On the upper side of main chassis)

•Replacement procedure

1. Remove the top plate, front panel, side panel and rear panel.
2. Remove the motor frame.
3. Remove the disk table and disk plate.
4. Make a knot around the screw S_1 , stretch the string in accordance with procedure from 1 to 17, and tie up the string end around the screw S_2 .
5. After having assembled the set completely, turn on the main switch to make sure that the disk table and disk plate opens or closes normally and that the normal music reproduction can be made.

Note) Adjust the tension of the stretched string by the use of the adjusting screw of the tension assemble so that the collar is brought into contact with the stopper as shown above.

Parts List

Parts No.	Stock No.	Description
1	60360530	Driving String (3m)
2	13303500	Tension Roller Ass'y

* How to make a knot

1. String binding start

2. String binding end

9. HOW TO REPLACE MECHANISM DRIVING STRING

(On the back side of main chassis)

•Replacement procedure

1. Remove the top plate, front panel, side panel and rear panel.
2. Remove the motor frame.
3. Remove the disk table and disk plate.
4. Remove five screws for fixing the main chassis, and then turn the main chassis upside down.
5. Make a knot around the screw S_1 , stretch the string in accordance with procedure from 1 to 21, and tie up the string end around the screw S_2 .
6. After having assembled the set completely, turn on the main switch to make sure that the disk table and disk plate opens or closes normally and that the normal music reproduction can be made.

Note) Adjust the tension of the stretched string by the use of the adjusting screw of the tension assembly as shown above.
